

# Trade, Misallocation, and Capital Market Integration

---

Laszlo Tetenyi

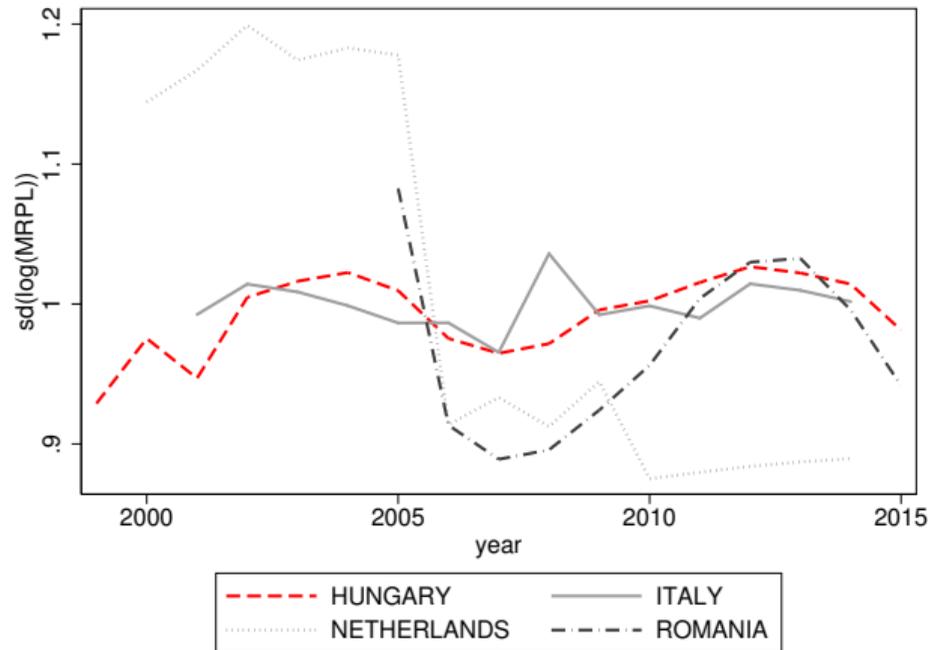

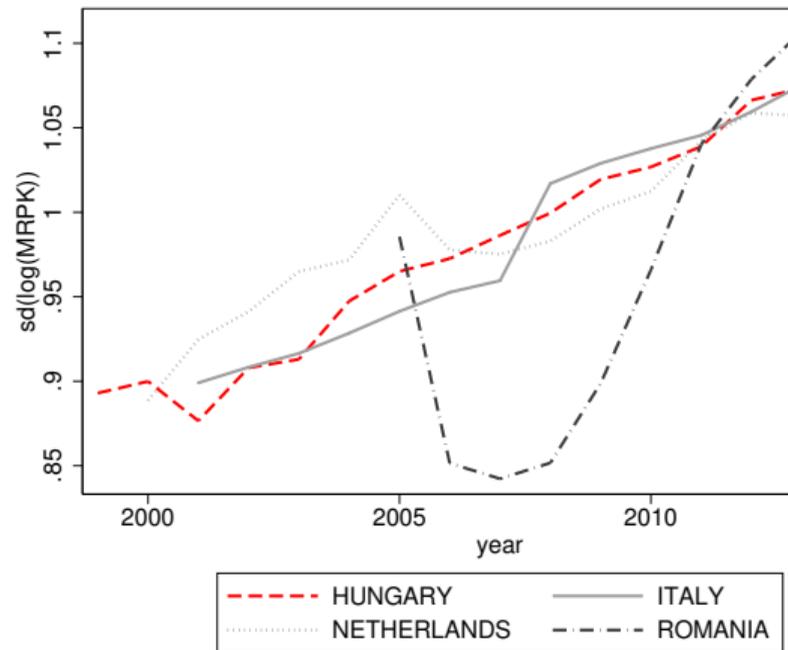

October 9, 2019

New York University

## Integration into the world economy

- Countries with underdeveloped capital markets open up their markets
- Goods market – Reduce trade barriers
- Capital market – Dispose of capital controls
- Conventional wisdom:
  - Trade liberalization improves productivity/output/welfare
  - Ambiguous effect of capital market integration
- Only focus on the empirics in this presentation
- Preliminary results – all feedback is welcome

# Dispersion of returns to capital and labor in the EU

# How do capital markets affect the gains from trade?

Goal: understand correlations

Level	Country	Sector	Firm

## TFP is positively correlated with trade

	$\log\left(\frac{Import}{GDP}\right)$	$\log\left(\frac{Credit}{GDP}\right)$	$\log\left(\frac{Import}{GDP}\right) \times \log\left(\frac{Credit}{GDP}\right)$	$CMI$	$\log\left(\frac{Import}{GDP}\right) \times CMI$
Log(TFP)	0.184***	0.185***	0.1061***	-0.0343	-0.0889***
s.e.	(0.0183)	(0.0107)	(0.008)	(0.0216)	(0.0168)

Standard errors in parentheses. N = 3983, Country and time FE

## corr(TFP,trade) is stronger with financial development

	$\log\left(\frac{Import}{GDP}\right)$	$\log\left(\frac{Credit}{GDP}\right)$	$\log\left(\frac{Import}{GDP}\right) \times \log\left(\frac{Credit}{GDP}\right)$	<i>CMI</i>	$\log\left(\frac{Import}{GDP}\right) \times CMI$
Log(TFP)	0.184***	0.185***	0.1061***	-0.0343	-0.0889***
s.e.	(0.0183)	(0.0107)	(0.008)	(0.0216)	(0.0168)

Standard errors in parentheses. N = 3983, Country and time FE

## corr(TFP,trade) is not/negatively affected if capital markets are integrated

	$\log\left(\frac{Import}{GDP}\right)$	$\log\left(\frac{Credit}{GDP}\right)$	$\log\left(\frac{Import}{GDP}\right) \times \log\left(\frac{Credit}{GDP}\right)$	<i>CMI</i>	$\log\left(\frac{Import}{GDP}\right) \times CMI$
Log(TFP)	0.184***	0.185***	0.1061***	-0.0343	-0.0889***
s.e.	(0.0183)	(0.0107)	(0.008)	(0.0216)	(0.0168)

Standard errors in parentheses. N = 3983, Country and time FE

## Implied TFP change in pp. in 1992 to 10 % import liberalization

Country	$\frac{\text{Credit}}{\text{GDP}}$	$\Delta TFP_{\emptyset CMI}$	$\Delta TFP_{CMI}$
Germany	88.7	4.9	2.6
Italy	58.15	3.6	2.3
Hungary	32.2	1.8	1.8

**Table 1:** The effect of an increase of the import share from 30% to 40%

# Misallocation and trade exposure

# Model of heterogeneous firms

## Findings

- Financial frictions & lower trade barriers can explain increase in misallocation
- Aggregate impact is magnified if there is a capital inflow to the country:
  - Productivity declines despite the increased trade – inequality increases further
  - But both output, consumption and welfare increases even more
- It is driven by the increased survival of unproductive firms
- The increase in misallocation takes time after trade liberalization
